

Have you ever thought about a career as a management consultant?

Start your Career at B&C as a CONSULTANT (m/w/d)

You enjoy data crunching, but data is not everything for you? You want to ignite the career turbo after your studies? Then start now as a consultant with Bronk & Company!

WHAT YOU CAN EXPECT

As a consultant you will strengthen our young, innovative team in our customer projects on various topics related to the metal industry. Through the structured analysis of problems and evaluation of relevant data, we develop solutions and action strategies for our customers.

From the very beginning, you will work together with your colleagues and customers to identify problems, develop ideas and concepts and put them into practice. In doing so, you will independently develop topic areas and contribute your part to the success of the project. Your entry into our projects is mainly through the analysis of customer data (big data) with the help of our BI tools. Your work will become part of our overall solutions and you will have the opportunity to present your results to our customers. Thus, you will quickly get in contact and discussion with leading executives from the industry and find your way into technical questions. This will enable you to constantly expand and deepen your knowledge in various spe-

cialist areas and experienced colleagues will support you in doing so. You will gain deep insights into the business and production processes of various companies in the metal industry. A fair salary, a career path tailored to you and a very good working atmosphere complete the picture.

WHO WE ARE LOOKING FOR

For our team we are looking for open-minded and ambitious personalities with a degree in (business) information technology and operations research or in the technical fields with an affinity for IT.

BI tools are not unfamiliar to you and you enjoy developing data models? You don't want to be solely a data professional, but you also want to develop yourself professionally and are interested in business and production processes? You are thirsty for knowledge and have a quick mind? You are interested in the metal industry or even already have knowledge about the production and further processing of steel, aluminum, copper or other metals? You are flexible, able to work under pressure, keen to work in Germany and abroad, speaking fluent German and English while always looking for the next challenge?
